#### **GROUP 2**

#### TASK A: EXTRACT USEFUL INFORMATION FROM CVE DESCRIPTIONS

Given the following CVE descriptions, fill the related form with the required information.

#### **EXAMPLE:**

### **CVE DESCRIPTION**

The ironic-api service in OpenStack Ironic before 4\_2\_5 (Liberty) and 5\_x before 5\_1\_2 (Mitaka) allows remote attackers to obtain sensitive information about a registered node by leveraging knowledge of the MAC address of a network card belonging to that node and sending a crafted POST request to the v1/drivers/\$DRIVER\_NAME/vendor\_passthru resource

Name of the	
software affected	OpenStack Ironic
	openocaen ironic
by the vulnerability	
Versions of the	
Software affected	5_x
by the vulnerability	
Versions before	
which the software	
is affected by the	5_1_2
vulnerability	
Vulnerability name	(in this case the name of the vulnerability does
	not appear in the description)
Type of Attacker	
who could exploit	Remote Attackers
the vulnerability	
Source of the	Leveraging knowledge of the address and sending
vulnerability	POST request
Effects of the	Obtain sensitive information
vulnerability	
Vulnerability	Information Disclosure and/or Arbitrary File Read
Category	
Time taken to	
extract the	1m 42s
required	
information	

# **Categories of Vulnerabilities**

Category	Description
Authentication bypass or Improper Authorization	An exploitation of this issue might allow an attacker to bypass the required authentication. Or the application does not perform properly the authentication check, when an user attempts to access a resource without the necessary permissions.
Cross-Site Scripting or HTML Injection	An exploitation of this issue might allow an attacker to execute arbitrary script code in the web browser of the site visitor and steal his cookie-based authentication credentials.
Denial Of Service (DoS)	An exploitation of this issue might allow an attacker to crash the affected application, denying any further access.
Directory Traversal	An exploitation of this issue might allow an attacker to gain read access to arbitrary file content on the affected system.
Local File Include, Remote File Include and Arbitrary File Upload	An exploitation of this issue might allow an attacker to include arbitrary remote files containing malicious code. The code could then be executed on the affected system with the webserver process privileges.
Information Disclosure and/or Arbitrary File Read	An exploitation of this issue might allow an attacker to get access to arbitrary files on the affected system.
Buffer/Stack/Heap/ Integer Overflow, Format String and Off-by-One	Input data are copied to an insufficiently sized memory buffer. An exploitation of this issue might allow an attacker to execute arbitrary code in the context of the affected application or cause denial of service conditions.
Remote Code Execution	An exploitation of this issue might allow an attacker to execute arbitrary code within the context of the affected application, potentially allowing an unauthorized access or a privilege escalation.
SQL Injection	The vulnerable application does not properly sanitize user supplied input data before using them in a SQL query. An exploitation of this issue might allow an attacker to compromise, access and modify data on the affected system with the database user process privileges.
Unspecified Vulnerability	A successful exploitation of this issue might allow an authenticated attacker to affect confidentiality or integrity or availability or all of them.

### **CVE DESCRIPTION #1 (CVE-2016-0777)**

The resend\_bytes function in path-0 in the client in OpenSSH 5\_x, 6\_x, and 7\_x before 7\_1p2 allows remote servers to obtain sensitive information from process memory by requesting transmission of an entire buffer, as demonstrated by reading a private key.

No Cab.	On an OCII
Name of the	OpenSSH
software affected	
by the vulnerability	
Versions of the	5_x, 6_x, 6_x
Software affected	
by the vulnerability	
Versions before	7_1p2
which the software	
is affected by the	
vulnerability	
Vulnerability name	The name does not appear in the description.
Type of Attacker	Remote attacker
who could exploit	
the vulnerability	
Source of the	Requesting transmission of an entire buffer.
vulnerability	
Effects of the	Obtain sensitive information.
vulnerability	
Vulnerability	Information Disclosure And/Or Arbitrary File
Category	Readig
Time taken to	5 m
extract the	
required	
information	

## **CVE DESCRIPTION #2 (CVE-2015-6658)**

Cross-site scripting (XSS) vulnerability in the Autocomplete system in Drupal  $6_x$  before  $6_37$  and  $7_x$  before  $7_39$  allows remote attackers to inject arbitrary web script or HTML via a crafted URL, related to uploading files.

Name of the	Drupal
software affected	
by the vulnerability	
Versions of the	6_x, 7_X
Software affected	
by the vulnerability	
Versions before	6_37, 7_39
which the software	
is affected by the	
vulnerability	
Vulnerability name	The name does not appear in the description.
Type of Attacker	Remote Attacker
who could exploit	
the vulnerability	
Source of the	Crafted URL
vulnerability	
Effects of the	Inject Arbitrary web script or HTML via a crafted
vulnerability	URL
Vulnerability	Cross-site Scripting or HTML Injection
Category	
Time taken to	6 m
extract the	
required	
information	

#### **CVE DESCRIPTION #3 (CVE-2016-2560)**

Multiple cross-site scripting (XSS) vulnerabilities in phpMyAdmin 4\_0\_x before 4\_0\_10\_15, 4\_4\_x before 4\_4\_15\_5, and 4\_5\_x before 4\_5\_5\_1 allow remote attackers to inject arbitrary web script or HTML via (1) a crafted Host HTTP header, related to path-0 (2) crafted JSON data, related to path-1 (3) a crafted SQL query, related to path-2 (4) the initial parameter to path-3 in the user accounts page; or (5) the it parameter to path-4 in the zoom search page.

Name of the	phpMyAdmin
software affected	
by the vulnerability	
Versions of the	4 0 x, 4 4 x, 4 5 x
Software affected	
by the vulnerability	
Versions before	4_0_10_15, 4_4_15_5, 4_5_5_1
which the software	
is affected by the	
vulnerability	
Vulnerability name	The name does not appear in the description.
Type of Attacker	Remote Attacker
who could exploit	
the vulnerability	
Source of the	Crafted Host http header; crafted JSON data;
vulnerability	crafted SQL query; initial parameter in the user
	accounts page; it parameter in the zoom search
	page.
Effects of the	Injecting arbitrary web script or HTML.
vulnerability	
Vulnerability	Cross-site Scripting or HTML Injection
Category	
Time taken to	5 m
extract the	
required	
information	

## **CVE DESCRIPTION #4 (CVE-2015-1927)**

The default configuration of IBM WebSphere Application Server (WAS) 7\_0\_0 before 7\_0\_0\_39, 8\_0\_0 before 8\_0\_0\_11, and 8\_5 before 8\_5\_5\_6 has a false value for the path-0 WebContainer property, which allows remote attackers to obtain privileged access via unspecified vectors.

Name of the	IBM WebSphere Application Server (WAS)
software affected	
by the vulnerability	
Versions of the	7 0 0, 8 0 0, 8 5
Software affected	7_0_0, 0_0_0, 0_3
by the vulnerability	
Versions before	7_0_0_39, 8_0_0_11, 8_5_5_6
which the software	
is affected by the	
vulnerability	
<b>Vulnerability name</b>	The name does not appear in the description.
Type of Attacker	Remote Attacker
who could exploit	
the vulnerability	
Source of the	Unspecified Vector
vulnerability	
Effects of the	Obtaining privileged access.
vulnerability	
Vulnerability	Authantication bypass or Improper Authorization
Category	
Time taken to	6 m
extract the	
required	
information	

# **CVE DESCRIPTION #5 (CVE-2015-5352)**

The x11\_open\_helper function in path-0 in ssh in OpenSSH before 6\_9, when ForwardX11Trusted mode is not used, lacks a check of the refusal deadline for X connections, which makes it easier for remote attackers to bypass intended access restrictions via a connection outside of the permitted time window.

Name of the	OpenSSH
110	Openioon
software affected	
by the vulnerability	
Versions of the	All version
Software affected	
by the vulnerability	
Versions before	6_9
which the software	
is affected by the	
vulnerability	
Vulnerability name	The name does not appear in the description.
Type of Attacker	Remote Attacker
who could exploit	
the vulnerability	
Source of the	Conenction outside of the permitted time window
vulnerability	
Effects of the	Bypassing intended access resctriction
vulnerability	
Vulnerability	Authantication bypass or Improper Authorization
Category	
Time taken to	6 m
extract the	
required	
information
